Juice Plus+® for Dogs

Juice Plus+® for Cats

Dog and Cat owners rejoice! The general nutrition supplement for your favorite pets is here: Juice Plus+® for Dogs and Juice Plus+® for Cats. The famous Juice Plus+® concept of “whole food nutrition” has now been adapted to the specific needs of our precious pets!

Juice Plus+® ...for Pets?

Juice Plus+® for Dogs and Juice Plus+® for Cats are concentrated whole food powders that you sprinkle onto your pet's regular food. They help to “unlock” the full nutritional value of your pet's food, and also provide concentrated, natural nutrients not present in most commercial pet food products.

Do dogs and cats really need a nutritional supplement?

Like most of us, our pets eat highly processed, overcooked food. This processing and cooking damages the nutritional value of the food. Essential nutrients are often either missing entirely or difficult to absorb.

The results are obvious. Our pets face many of the same health issues we do (like chronic degenerative diseases and allergies) largely because of their poor diet. Foods like Juice

Plus+® for Dogs and Juice Plus+® for Cats are less processed, and include “active” ingredients like enzymes and friendly microorganisms that help to correct these nutritional deficiencies.

When our pets eat the quality foods they need, their systems tend to function better and they become healthier and more energetic.

How does it work?

Both Juice Plus+® for Dogs and Juice Plus+® for Cats contain concentrated, highly nutritious whole food powders that are processed at low temperatures. This food is closer to its natural state, therefore easier for your pets to absorb. It also contains a wide variety of essential vitamins, minerals and fatty acids which your pet needs... and scores of micronutrients that exist in nature and make whole food the best source of nutrition.

Juice Plus+® for Dogs and Juice Plus+® for Cats contain a proprietary blend

of active enzymes. These enzymes help your pet digest and assimilate all the food they eat - proteins, fats, starches and fibers. Better digestion and absorption result in fuller utilization of nutrients and better elimination ...and help your pet's overall digestive system become more efficient.

Finally, Juice Plus+® for Dogs and Juice Plus+® for Cats contain friendly microorganisms to further aid your pet's gastrointestinal system. These microorganisms are naturally found throughout the digestive tract of healthy animals and help keep the tract free from unfriendly bacteria.

What results can I expect for my pet?

Our goal is simply to help your dog or cat live healthier, more energetic lives through better nutrition. Specific results will vary.

However, the ingredients we've included in Juice Plus+® for

Dogs and Juice Plus+® for Cats not only provide a rich blend of vitamins, minerals and essential fatty acids, but may also help
